

A C1/C2/C3 protocol separates direct questioning, fixed cueing, and dynamic relationship-aware cueing across four evidence layers. $\oplus$

Reminiscence needs an invitation, not an interrogation. A small social scene may make it easier to join a memory conversation—if the system also knows when to stay silent and stop.

Brief cue · gentle invitation · user
control · natural stop

External lookup remains off for emotional memory talk.

No diagnosis, dosage change, real emergency dispatch, or caregiver notification.

Move toward semi-automatic generation only after the deterministic trace and boundary policy remain stable.
